

Jomy P Jose

Software Developer | Web & Native Android

Perumpilavu, Kerala, India | +91 7293479588 | jomypjosevysery@gmail.com

Portfolio: jomypjose.github.io | GitHub: github.com/jomypjose | LinkedIn: linkedin.com/in/jomypjose

PROFILE

Software developer with 12+ years across application development, enterprise IT and networking. Built AssetPulse, a Node.js asset management application supporting 440+ branches, and Texprava, a native Kotlin Android document editor. Combines practical software development with cloud application hosting, secure network operations and technical leadership.

TECHNICAL SKILLS

Application development: Kotlin, native Android, JavaScript, Node.js, Java, Spring, Swing, SQL and API integration.

Android engineering: Document format conversion, adaptive layouts, local draft recovery, persistent undo, Android Keystore and device speech services.

Cloud & enterprise IT: Oracle OCI cloud application hosting, Zoho ManageEngine, systems operations and incident response.

Network security & operations: IPsec VPN, Sophos firewalls, ESCAN EDR, VoIP hardening; Huawei, ZTE, Nokia and Syrotech OLTs and managed switches.

PROFESSIONAL EXPERIENCE

Information Technology Officer | ESAF Cooperative

2023 - Present | Thrissur, India

- Designed and launched AssetPulse using Node.js to centralize hardware and software asset tracking across 440+ nationwide branches.
- Managed Oracle OCI infrastructure for cloud applications, maintaining a high-availability environment with 99.9% uptime.
- Managed branch connectivity through IPsec VPN and deployed Sophos firewalls and ESCAN EDR as separate network and endpoint security responsibilities.
- Led investigation and remediation of a critical VoIP server breach in July 2025, restoring service and strengthening system security.

Network Engineer | Community Cable Network LTD

2014 - 2023 | Thrissur, India

- Directed broadband operations for 25,000+ customers and served as the Control Room escalation point.
- Reduced downtime by 30% through proactive maintenance and network stability improvements.
- Mentored a 10-member technical team and oversaw configuration of 60+ managed switches and OLTs.

Java Application Developer | Centroid Software Technologies

May 2013 - December 2013 | Thiriprayar, India

- Developed web and desktop applications using Spring and Swing.
- Provided technical guidance for Android application development, code improvement and UI/UX.

Selected projects

Application development with operational context

TEXPRAVA | NATIVE ANDROID EDITOR

Independent project | 2026 | Kotlin, Android

- Built a native workspace for formatted documents, plain text, code and handwriting, with keyboard, stylus and voice input.
- Implemented document readers and writers for DOCX, OpenDocument, RTF and HTML, alongside formatting, tables, pictures and PDF export.
- Protected work with atomic local drafts, persistent undo and version history. Added locked-note encryption using Android Keystore and device screen-lock authentication.
- Handled unsupported document content with warnings and Save as protection; checked for external file changes before saving to avoid silent overwrites.
- Used Android's document picker for user-selected storage and device speech services for dictation and read aloud. Adapted layouts to phones, tablets and changing window sizes.
- Added JVM unit tests for document format round trips, editor behaviour, text encoding and version history. Google Play release in preparation.

ASSETPULSE | ENTERPRISE ASSET MANAGEMENT

Lead Developer | 2025 | Node.js, enterprise software

- Designed and launched a centralized asset intelligence platform for hardware and software tracking across 440+ nationwide branches.
- Implemented real-time lifecycle monitoring and resolved database synchronization issues, informed by hands-on enterprise IT operations.
- Used AI-assisted development with Google Antigravity to coordinate development tasks and accelerate implementation.
